

The following exercises should be done in the script with the “your_code_goes_here” id.

1. Write the following content on these elements:
 - h1 – I love h1
 - h2 – Secondary title
 - Id (special) – I am the special one
 - Input type name – Your name
 - Input type password - *****
 - Make the <label> elements all UPPERCASE without changing the HTML
2. Change style attribute to accomplish the following styling:
 - Give the <body> element a background of #bdc3c7
 - Make all <h2> elements orange
 - Make all elements blue(pick your own hexadecimal blue)
 - Give the 2nd <p> inside the 3rd <div> a 5px white border
 - Make all "checked" checkboxes have a left margin of 50px(margin-left: 50px)
3. Use the css function to change the following items:
 - Change the background on every paragraph to be yellow
 - Make all inputs have a 3px red border
 - Give everything with the class 'hello' a grey background
 - Make all the <p>'s that are nested inside of divs 25px font(font-size: 25px)
 - Give both <p>'s inside the 3rd <div> a pink background
 - Make the in the 3rd <div> element white and 20px font(font-size:20px)
4. Create an ul with the li content resulting on the iteration of fancyStuffContent values. Append it to the last available div. (Do it in plain JS and in jQuery)
